## PERFORATION QUESTIONNAIRE

Dear Sir / Madam,

Thank you for your kind enquiry. If you could please answer the following questions about your perforating requirements, we will be able to narrow down your requirements and be able to quote a solution for you accordingly.

1. What material are you wanting to perforate?
2. What is the thickness of the material?
3. What is the material width?
4. Is the material roll form or sheet form or other?
5. What is the hole diameter you require?
6. What is the hole spacing you require? (or hole population in holes per in<sup>2</sup> or cm<sup>2</sup>)
7. Do you require the perforations all the way across the web or in lanes? If in lanes, please illustrate.
8. Do you require a complete perforating unit? Or just the perforating tooling/components?
9. Is this perforating tooling/unit going to be mounted in an existing machinery line. If so, please describe the existing machinery and the space you have to mount this equipment and the line speed of the existing equipment
10. Do you have 90-100psi of air and 110/240/480V of electricity available?
